SONUS P235

AT THE CENTRE OF SOUND

We have devoted special attention to the amplification system, in order to faithfully reproduce the impressive dynamics, the wide sound spectrum, and all the amazing spaciousness of the pipe organ sound.

A revolutionary system called RAR (Real Audio Rendering) is able to recreate with great accuracy the acoustic field produced by a real pipe organ in a large reverberant space. The detailed parameterization given by Physical Modelling, combined with the careful and lengthy work of components integration, has made the sound from the different speakers extremely natural.
